

# PSYCHEDELIC SASQUATCH SILICON

## What is it?

It's no secret that the Sasquatch™ is a heavily modified Fuzzface™. It's a great circuit that you can do a lot to and I absolutely love tweaking with it. Jimi Hendrix did too and his modifications have been documented for years. The Psychedelic Sasquatch Silicon™ has been modified to the same specs that Roger Mayer used on Jimi's late 60's Fuzzface™. Although they used Germaniums for his first album, later albums and performances utilized pedals with Silicon transistors, which I feel more capture that classic Hendrix tone. All of this and the Psychedelic Sasquatch Silicon™ still has the Tortuga trademark, "Hungry/Full" low end switch and of course the "Make Him Mad" freak out side. You don't get more psychedelic than that.

## How does it work?

Check to see if your Psychedelic Sasquatch Silicon™ came with a 9 Volt battery. If for some reason it didn't, make sure to use an alkaline battery or just use the DC power jack.

**Important: Only use a 9 Volt, 200mA, negative tip DC adaptor like the Boss PSA 120.**

At first glance the controls may not seem to make much sense. Here's a breakdown of what they do...

**Find Him** = Turns the effect on

**Howl** = Volume

**Growl** = Fuzz

**Hungry** = Bass cut

**Full** = Original, bass boost

**Make Him Mad** = Engages the freakout mode

**Anger** = Amount of freakout

**Enter** = You plug your guitar into here

**Exit** = Well, just guess...

"Howl" and "Growl" are pretty self explanatory after you start tweaking them. When you want to "Make Him Mad" make sure you have your "Howl" turned all the way up, then start turning the "Anger" knob until you have a nice balance of fuzz and noise. If you turn the "Anger" knob all the way up, you can control the pitch of the feedback with the volume, tone and switch on your guitar. You'll have hours of fun irritating anyone in the vicinity.

**Note: You can only control the "Make Him Mad" freak out mode with the controls on your guitar if your guitar is plugged directly into the Sasquatch. Any pedal that is before the Sasquatch in the signal chain will override this control.**

**Note for bass players: To get the most out of your Sasquatch, be sure to use a bass with passive electronics.**

## What if it breaks?

All Tortuga Effects have a **Three Year Warranty**. I want you to be confident in the fact that your pedal will always work, so if you have any problems with it ("problems" do not include dropping it, backing over it with your truck or dropping it and backing over it with your truck) please contact an authorized Tortuga Effects dealer or just contact me directly and I'll get it taken care of.

Enjoy your cool new noisemaker!
